

LocalBuka Intern Assessment

Track: Frontend Engineering

Time Limit:	3-5 Days (Take-Home)
Target Level:	Software Engineering Intern (Calibrated Scope)
Submission:	Email your public GitHub repository link and a 2-minute walkthrough video to hellohr@localbuka.com

Product Context

For the Frontend Intern track, you will build a clean, responsive web dashboard using React and TypeScript. You will connect to mock local endpoints (or write standard mock APIs directly inside the frontend) to present a smooth user experience. We are looking for functional flow, component composition, state handling, and attention to visual detail.

Practical Requirements

You will build 2 main pages/views in React:

- **Buka Discovery Dashboard:** Render a grid of restaurant cards. Implement filters for Cuisine type and Rating. Show a visual skeleton loader while data is loading.
- **Restaurant Cards:** Show details, photos, and tags. Include a 'Save/Favorite' button implementing optimistic state updates (instantly highlights on click, and reverts with an alert if the API call fails).
- **Points & Rewards Panel:** Displays the user's mock points balance and lists the recent transaction history ledger.

Technical Assessment Questions

Q1. Optimistic UI Updates & Error Recovery

Explain how you implemented the optimistic favorite toggle. Provide a code sample showing how you handle rolling back state in case the API request fails.

Q2. React Component Optimization

Suppose the restaurant listing renders 200+ cards, causing scrolling lag. Name 2 React strategies or techniques you would use to optimize rendering performance.

Evaluation Rubric

Your submission will be scored out of 100 points based on the following breakdown:

Criteria	Weight	Description
UI Completeness & Aesthetics	35 pts	Responsive layout, clean color palette, modern cards matching LocalBuka branding.
State Management & Rollbacks	25 pts	Optimistic UI state updates successfully and rolls back cleanly on network failures.
Loading & Empty States	20 pts	Skeleton loaders present and handles empty search results nicely.
TypeScript & Code Quality	20 pts	Props typed strictly, reusable component design, clean folder structure.
